GHULAM AHMAD MUJTABA

SENIOR MULTI-CLOUD & INFRASTRUCTURE ENGINEER
Cloud Architecture | Azure | AWS | OCI | Hybrid Cloud | Infrastructure | DevOps | Automation

Dubai, United Arab Emirates
+971 56 365 8464
gamujtaba.pk@gmail.com

PROFESSIONAL SUMMARY

Senior Multi-Cloud & Infrastructure Engineer with 10+ years of hands-on experience designing, implementing, migrating, managing, and supporting enterprise infrastructure across Microsoft Azure, AWS, Oracle Cloud Infrastructure (OCI), Sangfor Cloud/HCI, virtualization, and hybrid environments.

Strong expertise in cloud engineering and operations, compute, storage, networking, virtualization, security, identity and access management, monitoring, backup, disaster recovery, high availability, workload migration, and infrastructure automation.

Experienced in managing business-critical infrastructure across public cloud, private cloud, and on-premises environments, with strong capabilities in incident troubleshooting, performance optimization, capacity planning, security management, infrastructure lifecycle management, and operational continuity.

Hands-on experience with Azure, AWS, OCI, Sangfor HCI/SCP, Windows Server, Linux, VMware, enterprise networking, firewalls, VPN, VDI, RDP, backup, and disaster recovery. Strong automation background using PowerShell, Bash, Python, ARM Templates, AWS CloudFormation, AWS CLI, Jenkins, and CI/CD.

Proven ability to work across cloud engineering, infrastructure operations, architecture, migration, security, disaster recovery, automation, and technical leadership, delivering secure, scalable, highly available, and reliable enterprise environments.

CORE CLOUD & INFRASTRUCTURE EXPERTISE

Multi-Cloud & Infrastructure: Microsoft Azure | AWS | OCI | Sangfor Cloud/HCI | Hybrid Cloud | Multi-Cloud | Virtualization | Enterprise Infrastructure

Cloud Operations: Cloud Infrastructure Operations | Monitoring | Incident Management | Troubleshooting | Performance Optimization | Capacity Planning | Availability Management | Patch Management | Change Management

Networking: VNet | VPC | VCN | Subnets | Routing | VLANs | VPN | ExpressRoute | Direct Connect | FastConnect | Peering | Load Balancing | Firewalls | NAT | DNS | DHCP

Security & Identity: IAM | RBAC | Entra ID | Active Directory | MFA | Conditional Access | SSO | NSG | Security Groups | WAF | Firewall | Endpoint Security | Vulnerability Management

Backup & Disaster Recovery: Backup | VM Replication | Snapshots | High Availability | Disaster Recovery | Failover | Recovery | Business Continuity | Recovery Testing | NAKIVO

Automation & DevOps: PowerShell | Bash | Python | Terraform | ARM Templates | AWS CloudFormation | AWS CLI | Jenkins | CloudBees | CI/CD | Infrastructure as Code

Systems & Virtualization: Windows Server | RHEL | Ubuntu | CentOS | AlmaLinux | Debian | VMware | Docker | Docker Swarm | OpenShift

CERTIFICATIONS

AWS
- AWS Certified DevOps Engineer – Professional
- AWS Certified Solutions Architect – Professional
- AWS Certified Solutions Architect – Associate

Sangfor
- Sangfor Certified Technical Professional – HCI
- Sangfor Certified Technical Associate – HCI
- Sangfor Certified Technical Professional – aStor
- Sangfor Certified Solution Architect – Cloud & Security

Microsoft
- Microsoft Certified: Azure Solutions Architect Expert
- Microsoft Certified: Azure Administrator Associate

Oracle
- Oracle Cloud Infrastructure 2020 Certified Architect – Associate

PROFESSIONAL EXPERIENCE

Senior Multi-Cloud & Infrastructure Engineer
Pebi Technologies LLC. | United Arab Emirates | Mar 2024 – Present

- Lead enterprise multi-cloud and infrastructure architecture across Azure, AWS, OCI, private cloud, and hybrid environments, aligning infrastructure design with business, security, availability, and operational requirements.
- Design and implement cloud and infrastructure modernization strategies, including workload migration, hybrid-cloud integration, infrastructure optimization, and platform standardization.
- Architect and deploy a 3-node Sangfor HCI cluster, establishing a scalable private-cloud platform for enterprise workloads and centralized infrastructure management.
- Successfully migrate 100+ physical/on-premises servers and workloads to Sangfor HCI, including planning, dependency assessment, VM provisioning, migration execution, validation, and post-migration optimization.
- Design and administer Sangfor SCP environments, including resource pools, multi-tenancy, VM lifecycle management, quotas, capacity planning, and centralized cloud operations.
- Implement and manage Sangfor NGAF/NGF security infrastructure, integrating firewall policies, network security controls, segmentation, access control, and security monitoring.
- Design and support VDI and RDP environments, including virtual desktop provisioning, user access, session management, performance troubleshooting, and secure remote-access infrastructure.
- Manage day-to-day HCI and cloud infrastructure operations, covering compute, storage, virtualization, networking, capacity, performance, availability, incident resolution, and platform health.
- Design and maintain Disaster Recovery and business continuity solutions, including Sangfor DR, replication, recovery planning, failover/failback procedures, and recovery validation.
- Architect and administer Azure infrastructure, including virtual machines, VNets, subnets, NSGs, routing, VPN connectivity, identity, RBAC, storage, monitoring, backup, and hybrid-cloud integration.
- Design and manage AWS infrastructure across compute, storage, networking, IAM, security, monitoring, backup, high availability, and workload deployment requirements.
- Implement and support Oracle Cloud Infrastructure (OCI) environments covering compute, VCN networking, subnets, routing, security, storage, IAM, load balancing, and hybrid connectivity.
- Design and troubleshoot enterprise networking and security, including VLANs, routing, firewalls, VPNs, NAT, segmentation, secure remote access, and Fortinet security solutions.
- Implement and manage backup and replication infrastructure using NAKIVO, including backup policies, repository configuration, replication, recovery testing, retention, and operational monitoring.
- Administer Windows Server and Linux infrastructure, including Active Directory, system configuration, patching, hardening, services, troubleshooting, performance optimization, and operational support.

- Lead technical troubleshooting, infrastructure documentation, capacity planning, vendor coordination, project implementation, escalation management, and operational improvement across cloud and enterprise infrastructure environments.
- Automate infrastructure and operational activities using PowerShell, Bash, and Python to improve efficiency and operational consistency.

Cloud Architect / Engineer

Etisalat by e& | United Arab Emirates | Jan 2020 – Feb 2024

- Designed and delivered end-to-end Azure and OCI cloud architectures, ensuring high availability, scalability, performance, and enterprise security compliance.
- Architected and implemented Azure Landing Zones, governance models, and hybrid-cloud frameworks for large-scale enterprise environments.
- Led on-premises to cloud migration programs, covering workload assessment, migration planning, architecture design, execution, validation, and post-migration support.
- Designed and implemented hybrid connectivity using Azure ExpressRoute and VPN Gateway solutions, integrating enterprise on-premises infrastructure with Azure environments.
- Produced detailed HLD/LLD documentation, architecture diagrams, technical designs, and migration plans for enterprise cloud transformation initiatives.
- Implemented enterprise identity and access solutions using Active Directory and Azure AD integration, supporting secure authentication across hybrid environments.
- Designed and implemented OCI cloud infrastructure covering compute, storage, networking, security, and enterprise workload requirements.
- Designed high-availability and disaster-recovery architectures, supporting business continuity, resilience, and minimal service disruption.
- Led architecture governance, technical design reviews, solution evaluations, and stakeholder alignment sessions across multiple enterprise projects.
- Managed enterprise middleware platforms including Oracle WebLogic, IBM WebSphere, JBoss, and Apache Tomcat, ensuring scalability, reliability, and operational stability.
- Supported cloud security governance across Azure and OCI, including IAM policies, access controls, endpoint security, and compliance enforcement.
- Performed capacity planning, performance optimization, resource analysis, and cloud cost management for enterprise workloads.
- Implemented monitoring and observability using New Relic, Grafana, and native Azure/OCI monitoring capabilities.
- Automated infrastructure provisioning and deployment workflows using Jenkins and CloudBees pipelines, improving deployment consistency and operational efficiency.

Cloud / DevOps Engineer

Bliss Brand Technologies | Lahore, Pakistan | Dec 2017 – Dec 2019

- Designed and developed cloud-based infrastructure, applications, and services aligned with organizational and business requirements.
- Collaborated with development and operations teams to identify and eliminate bottlenecks across the software delivery lifecycle.
- Evaluated and implemented cloud solutions and infrastructure architectures in collaboration with engineering teams.
- Designed and deployed CI/CD automation frameworks, improving deployment consistency and release reliability.
- Monitored and managed infrastructure performance, scalability, availability, and security, implementing proactive improvements.
- Troubleshot and resolved application, deployment, infrastructure, and operational issues across cloud and on-premises environments.

- Implemented cloud security best practices covering data storage, processing, IAM, and compliance requirements.
- Managed version control, configuration management, and DevOps toolchains supporting software development and infrastructure operations.
- Conducted infrastructure vulnerability assessments, patching, and remediation to reduce security and operational risks.
- Reviewed existing infrastructure and applications, identifying and implementing performance, reliability, and operational efficiency improvements.

Network & Linux Administrator

Cyber Craft Pvt Ltd | Lahore, Pakistan | Jan 2015 – Nov 2017

- Administered and provided technical support for Linux environments including Ubuntu, Red Hat, CentOS, and Debian, as well as Windows Server systems.
- Configured and maintained Apache, IIS, MySQL, and PHP-based hosting environments supporting business applications and websites.
- Installed, configured, and managed open-source software packages across Linux and Windows environments.
- Performed system monitoring, performance tuning, upgrades, patching, troubleshooting, and security hardening.
- Installed and managed server hardware, peripherals, DNS, DHCP, and core network services.
- Implemented and tested backup procedures, disaster recovery plans, and infrastructure security measures.
- Troubleshot, resolved, and documented server, network, application, and system issues, minimizing service downtime.
- Managed business hosting environments including shared hosting, email hosting, WordPress hosting, and cloud hosting.
- Installed and administered dedicated servers, Microsoft Exchange, VPS platforms, cloud servers, and virtual desktop environments.
- Managed domain registration, renewals, DNS/nameserver configuration, and hosting-related services.
- Worked with management on project scope, priorities, capacity planning, infrastructure requirements, and IT procurement.
- Supported 24/7 infrastructure operations, including after-hours and weekend incident response.

CLOUD PLATFORM EXPERTISE

Microsoft Azure

- Azure Landing Zones, Management Groups, subscriptions, RBAC, Azure Policy, governance, and enterprise cloud architecture.
- Azure Virtual Machines, VM Scale Sets, managed disks, storage accounts, Azure Files, and enterprise compute infrastructure.
- Azure networking including VNets, subnets, VNet peering, route tables, NSGs, private endpoints, and network segmentation.
- Hybrid connectivity using ExpressRoute, Site-to-Site VPN, Point-to-Site VPN, Azure VPN Gateway, and on-premises integration.
- Azure application delivery using Load Balancer, Application Gateway, Front Door, Traffic Manager, and CDN.
- Azure Site Recovery, Azure Backup, Availability Zones, geo-redundant storage, high availability,

Amazon Web Services

- AWS infrastructure architecture covering EC2, EBS, AMIs, S3, RDS, Elastic Load Balancing, and enterprise workload deployment.
- AWS networking using VPCs, subnets, route tables, Security Groups, NACLs, NAT Gateway, and network segmentation.
- AWS connectivity using Route 53, Site-to-Site VPN, Direct Connect, DNS, and hybrid on-premises integration.
- AWS identity and security using IAM, roles, policies, WAF, Shield, Firewall Manager, and security best practices.
- AWS governance using AWS Organizations, Control Tower, multi-account architecture, account provisioning, and centralized governance.
- AWS high availability and scalability using Auto Scaling, Elastic Load Balancing, resilient

and disaster recovery.
- Azure security using Microsoft Entra ID, Conditional Access, MFA, Key Vault, Defender for Cloud, Azure Firewall, and identity governance.
- Azure monitoring and operations using Azure Monitor, Log Analytics, alerts, Network Watcher, diagnostics, performance analysis, and operational troubleshooting.
- Azure migration, hybrid-cloud transformation, infrastructure automation, PowerShell, infrastructure optimization, and cloud cost/performance management.

OCI

- Oracle Cloud Infrastructure architecture covering Compute, VCN, subnets, routing, security controls, storage, and enterprise workloads.
- OCI networking using VCN, subnets, route tables, security lists, Network Security Groups, gateways, and network segmentation.
- Hybrid connectivity using Dynamic Routing Gateway (DRG), VCN peering, VPN, FastConnect, and on-premises integration.
- OCI compute and application infrastructure using Compute Instances, Instance Pools, VNICs, public/private IPs, and scalable workloads.
- OCI storage services including Block Volume, Object Storage, File Storage, and enterprise storage architecture.
- OCI load balancing and application delivery using Load Balancer, backend configuration, public/private connectivity, and traffic distribution.
- OCI Fault Domains, Availability Domains, cross-region architecture, high availability, resilience, and disaster recovery.
- OCI security and governance using IAM, users, groups, policies, access controls, security configuration, and cloud governance.
- OCI enterprise application platforms including Oracle WebLogic, Oracle HTTP Server (OHS), infrastructure monitoring, performance optimization, and operational support.

architecture, and multi-AZ deployments.
- AWS application and container services including ECS, containers, Redis, OpenSearch, and supporting application infrastructure.
- AWS DevOps and deployment automation using CodePipeline, CodeBuild, CodeDeploy, CI/CD workflows, and infrastructure automation.
- AWS operations using CloudWatch, Cost Explorer, Trusted Advisor, AWS DMS, Well-Architected principles, performance optimization, and cost management.

Sangfor

- Sangfor HCI architecture and deployment, including cluster design, compute virtualization, storage, networking, and enterprise workload consolidation.
- Sangfor SCP for private-cloud management, resource pools, multi-tenancy, quotas, VM lifecycle management, and centralized infrastructure operations.
- Sangfor aStor storage architecture, storage management, capacity planning, performance optimization, and enterprise workload support.
- Sangfor NGAF/NGF for next-generation firewall deployment, security policies, traffic control, network protection, and enterprise security.
- Sangfor Endpoint Secure / EDR / aSEC for endpoint protection, security management, threat protection, and infrastructure security.
- Sangfor Disaster Recovery solutions covering replication, recovery planning, failover/failback, recovery validation, and business continuity.
- Sangfor VDI and virtual desktop infrastructure, including desktop provisioning, user access, performance management, and remote-access environments.
- Sangfor cloud migration and infrastructure transformation, including physical-to-virtual migration, workload consolidation, HCI operations, capacity planning, troubleshooting, and hybrid-cloud integration.

EDUCATION

Bachelor of Science in Computer Science | Al Khair University (AJ&K) – Pakistan | January 2016
